

1. Frontend: you could just hit vandycs101.com.
 - Set up, npm install, which will download a lot of packages
 - Run ng serve.
 - Files mainly in src/app
 - Connection to backend is in src/app/getting.service.ts
 - Please watch my video if you are not sure about my frontend.
2. Backend:
 - a. the connection between the Database and the backend is in Routes/getter
 - b. Npm install, which will download a lot of packages.
 - c. Node bin/www
 - d. I took out the server password, please watch my video if you are not sure about my backend.
3. Database file:
 - a. Project2-creat is the mega table import,
 - b. Project2-shrink contains all the smaller tables, index, views, grant, and constraints.

PS: We spend incredible amount of work and time on this project, show mercy. Lol
